

# ABSTRACT

The tool comprises, in a casing (2), electrically operated components and a housing (4) to accommodate a battery (3) that powers the said components, with detachable means (10, 24) of securing the battery in its housing in a position of mechanical locking and electrical connection to the said components and in a position in which it is mechanically retained in its housing but electrically disconnected.

The securing means (24) are designed to retain the ~~battery (3) in the electrically disconnected position~~ only by friction (24, 31), thus avoiding any wrong move.
